How Students Benefit from SICP

While studying

- Practice-integrated teaching
- Collaborative Bachelor's and Master's Theses
- Complementary learning programs

While working

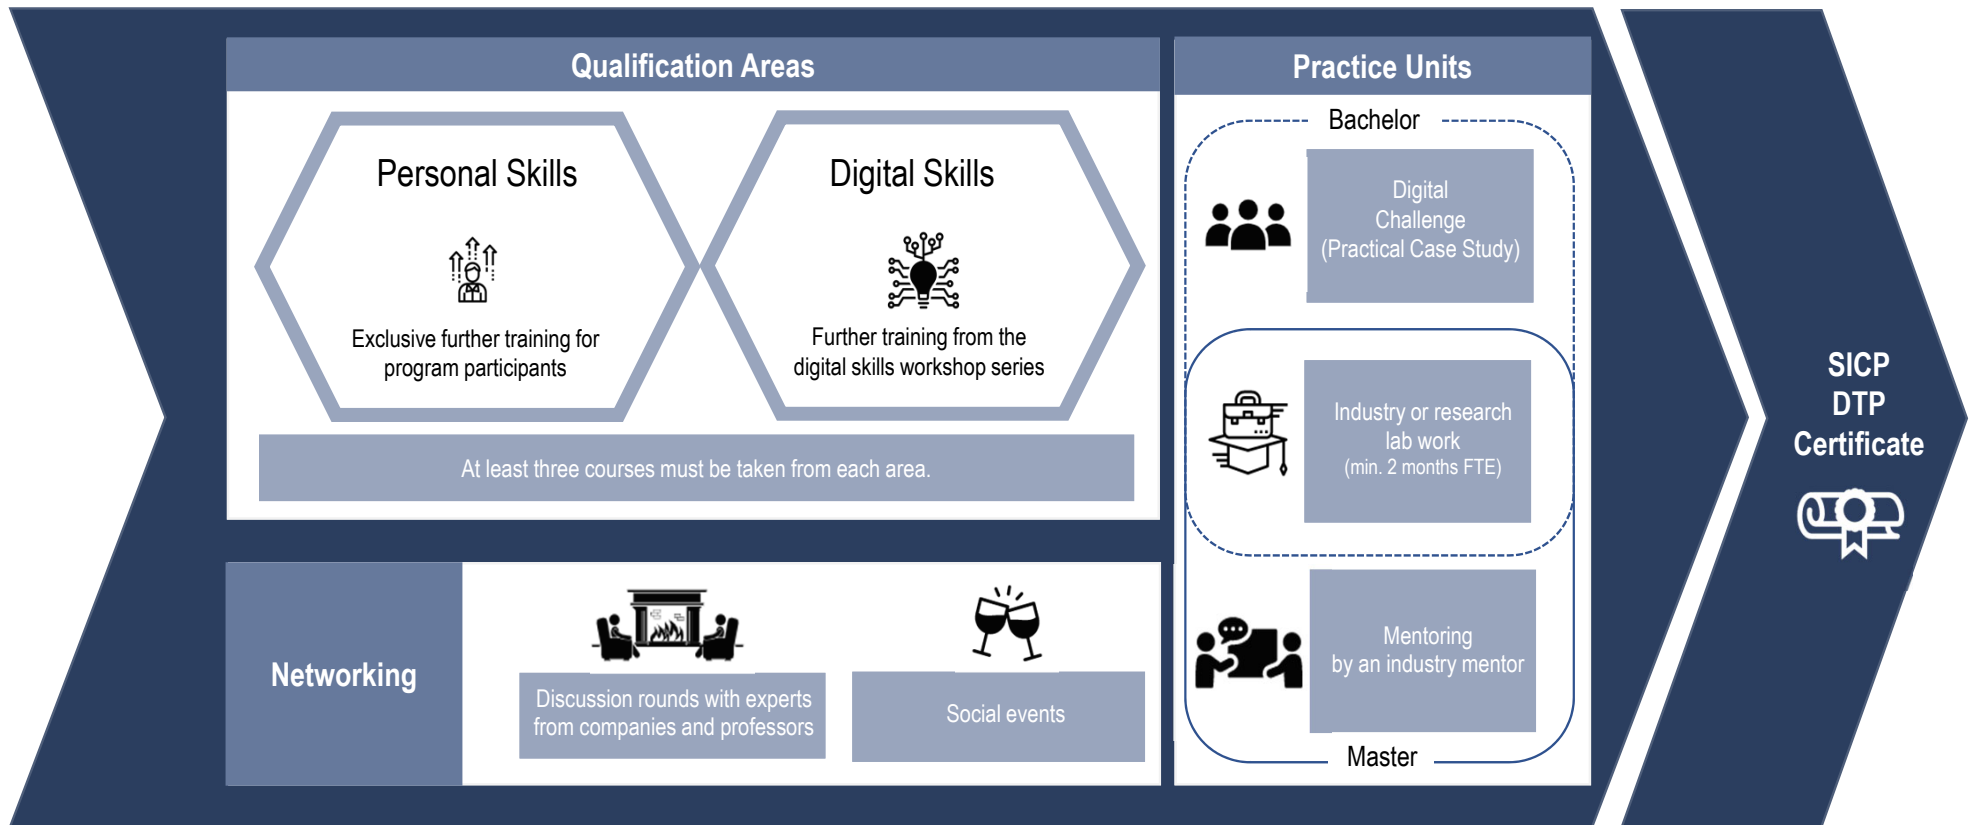

- Student jobs in collaborative research projects with industrial partners
- Student jobs at SICP member companies

When graduating

- Career events and match-making with member companies

#DIGITALENTS

SICP Digital Talents Program: Our Extracurricular Certification Program

- + Practical experience and insights
- + Income while studying
- + Additional mentoring from company

Students

University

- + Attractive place to study
- + More (good) students
- + Contacts with companies

Partner

- + Attractive employer
- + Early retention of good students

Future Perspective: Collaborative Studying

We are currently working on setting up a collaborative study program in computer science

- Further integrating profound university education and practical experience from work in industry
- Typically only offered by Universities of Applied Sciences
- Possible ingredients being discussed:
 - Providing joint Bachelor's and Master's theses
 - Synchronised study and work plan (e.g. selection of lab courses, days of lectures, exams)
 - Joint study marketing to attract more good students
 - Crediting of externally achieved qualifications (e.g. programming)
 - Specialised collaborative courses involving the industry partners
